DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

Suzuki (U.S. 6,725,908) and Kobayashi et al. (U.S. 5,998,863) both fail to disclose the following patentable limitations of the applicant's claimed and disclosed invention:

- a refrigerant container which has a heat-generating member attached to a bottom surface thereof and which reserves therein refrigerant;
- a heat radiating portion having a plurality of tubes, which are connected to the inside of the refrigerant container and are provided substantially upright on an upper surface of the refrigerant container;
- a header tank by which the plural tubes are communicated;
- a portion of the upper surface of the refrigerant container is referred to a boiling area; and
- at least a tube of the plurality of tubes located within the boiling area has a passage defined by a lower end opening portion connected to the refrigerant container and has a cross sectional area of the passage larger than that of the tube located outside the boiling area.

The combinations of the claimed limitations are novel and found to be allowable over prior art. The cited reference taken singly or in combination does not anticipate or make obvious applicant's claimed invention.

Allowable Subject Matter

2. Claims 1-3 and 5 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
